

Learning in the Leaves

Single Polled Shelter

Stage 1: The first thing you need to find is an upright, which is at the height you require. This could either be a point on a tree, a branch you cut and shape or perhaps a pole you bring with you.

Stage 2: Attach the middle of the longer edge of the tarp to the upright at the required height.

Stage 3: Attach the two corner of attached edge partially in front of the upright. Then attach other point and corners to the ground. You will end up with almost a bell tent shape with a V entrance.
